ASSIGNMENT-4

QUESTION:

Write Code and connections in wokwi for ultrasonic sensor. whatever distance is less than 100 cm send "Alert" to IBM cloud and display in device recent events.

CASE 1: Distance less than 100cm → It Alerts

CASE 2: Distance more than 100cm → It won't Alert

CASE 3: Beyond limits → Out of Range

CODING:

```
//pins
const int TRIG_PIN = 7;
const int ECHO PIN = 8;
//anything over 400cm(23200 us pulse)is "out of range"
const unsigned int MAX_DIST = 23200;
void setup() {
 //The Trigger pin will tell the sensor to range find
  pinMode(TRIG PIN, OUTPUT);
  digitalWrite(TRIG_PIN, LOW);
  //Set Echo pin as input to measure the duration of pulse coming back from
the
 //distance sensor
 pinMode(ECHO PIN, INPUT);
  //We'll use the serial monitor to view the sensor output
 Serial.begin(9600);
}
void loop() {
  unsigned long t1;
  unsigned long t2;
  unsigned long pulse_width;
  float cm;
 float inches;
 //Hold the trigger pin high for at least 10us
 digitalWrite(TRIG_PIN, HIGH);
  delayMicroseconds(10);
  digitalWrite(TRIG_PIN, LOW);
 //wait for pulse on echo pin
 while (digitalRead(ECHO_PIN) == 0);
  //Measure how long the echo pin was held high (pulse width)
  //note the micros()counter will overflow after -70min
```

```
t1 = micros();
  while (digitalRead(ECHO_PIN) == 1);
  t2 = micros();
  pulse_width = t2 - t1;
  //calculate distance in centimeters and inches. The constantsare found in
the
  //datasheet, and calculated from the assumed speed of sound in air at sea
level(-340m/s)
  cm = pulse_width / 58;
  inches = pulse_width / 148.0;
  //print out results
  if (pulse_width > MAX_DIST) {
   Serial.println("Out of range");
  }
  else
    Serial.println("******************************);
    Serial. println("The Measured Distance in cm:");
    Serial.println(cm);
    if (cm < 100)
      //while (true)
        Serial.println("Alert!");
      }
    Serial.println("*******************************);
  //wait at least 1000ms before next measurement
 delay(1000);
}
```
